Fax 617-495-7049
Email RKURUCZ@CFA.HARVARD.EDU

This is a combined Web/outgoing-FTP site, KURUCZ.HARVARD.EDU or CFAKU5.CFA.HARVARD.EDU. It provides up-to-date public access to my data and programs. These are the same programs and files that I use in my research. Many bugs and problems have been corrected but there are still many more errors remaining to be found. Programs and data that I would not use myself because they are still under development are not on this computer. Many of the files are large and are also available on CDs or DVDs, and I am willing to write DVDs on demand. Some files taken from Kurucz CD-ROMs 1-26 are given for historical checks although many have been replaced by new versions. Binary versions will eventually be replaced by (much larger) ASCII versions. I am willing to rewrite them in ASCII on demand. Neither the programs nor data are "black boxes". You should not be using them if you do not have some understanding of the physics and of the programming in the source code.

Theoretical models in the VO?

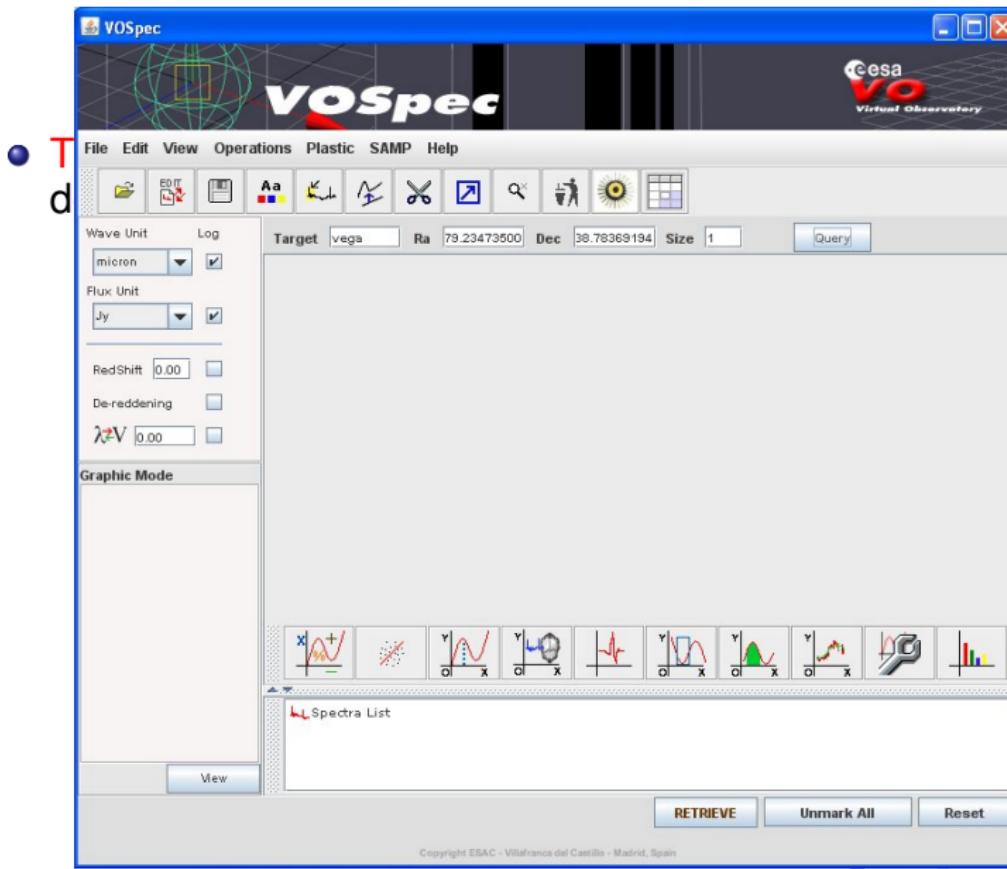

Same problems as the observational data.

- Where are they? → [Registries](#)
- Data format (ASCII, FITS, ...) → [VOTables](#)
- Data characterisation → [Data Models](#)
- Data Access
 - VO protocols (ConeSearch, SIAP, SSAP, ...) are built around coordinates
 - <http://.../ssap.jsp?POS=336.5228,-48.43854&SIZE=0.2>
 - NOT VALID FOR THEORETICAL OBJECTS
 - A theoretical model is defined by a set of parameters and the allowed values for each of them.
 - Those parameters and values are not the same for different models.

Theoretical spectra in the VO.

- **TSAP**: Protocol to access theoretical spectra jointly developed by SVO & ESAVO.
 - Dialog Server-Application

Theoretical spectra in the VO.

Theoretical spectra in the VO.

The screenshot shows the VOSpec interface for querying theoretical spectra. The top bar includes the VOSpec logo, window controls, and the esa VO Virtual Observatory logo.

Server Selector: Shows a tree view of available services. Under "Theoretical Spectra Services", several options are listed, with "Kurucz ODFNEW /NOVER models" checked.

Query by params: A detailed query configuration window. The "Query" section specifies "TARGET.NAME vega", "POS 279.234735,38.78369194", and "SIZE 1". The "Service Specific Query" section specifies "Kurucz ODFNEW /NOVER models" and sets parameters: "teff_min 3500", "teff_max 3500", "logg_min 0.00", "logg_max 0.00", "meta_min -2.50", and "meta_max -2.50".

Query Outlook: Displays the URL <http://www.jaelf.inta.es/projects/vottheory/vdb2/v2.html>.

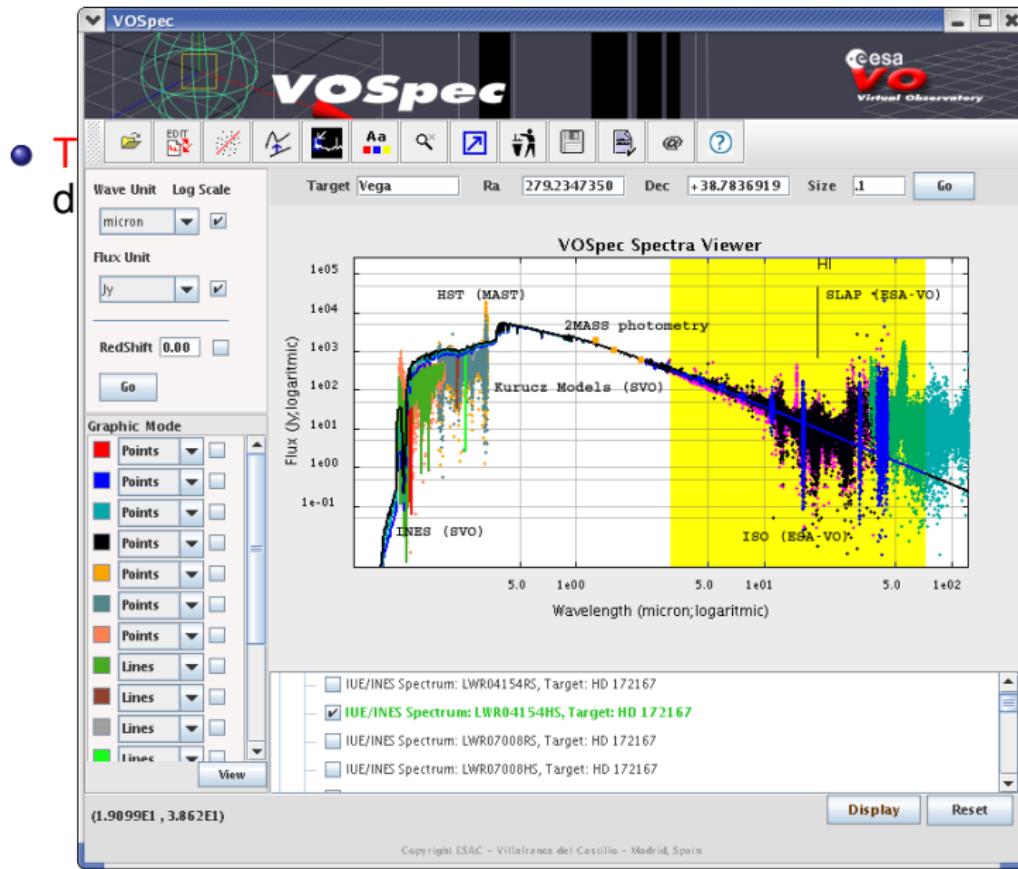

Insert Param Value: A panel for entering parameter values, currently empty.

Spectra List: A panel showing a grid of small plots representing different spectral types or models. Below it is a "Spectra List" table.

Buttons: "View", "RETRIEVE", "Unmark All", and "Reset".

Bottom Bar: Includes copyright information ("Copyright ESAC - Villafranca del Castillo - Madrid, Spain") and navigation icons.

Stars and brown dwarfs				Session: (info) (Change)			File: LOrI (info) (Change)			

HR Diagram

This option allows you to estimate values for the age and the mass of the objects. In order to do that, the ($T_{eff}, \log(L)$) values obtained from the fitting are used as starting points for interpolating collections of theoretical isochrones and evolutionary tracks obtained from the VO. Then, a HR diagram is displayed showing the data points, isochrones and evolutionary tracks.

Take a look to the corresponding [Help Section](#) and [Credits Page](#) for more information.

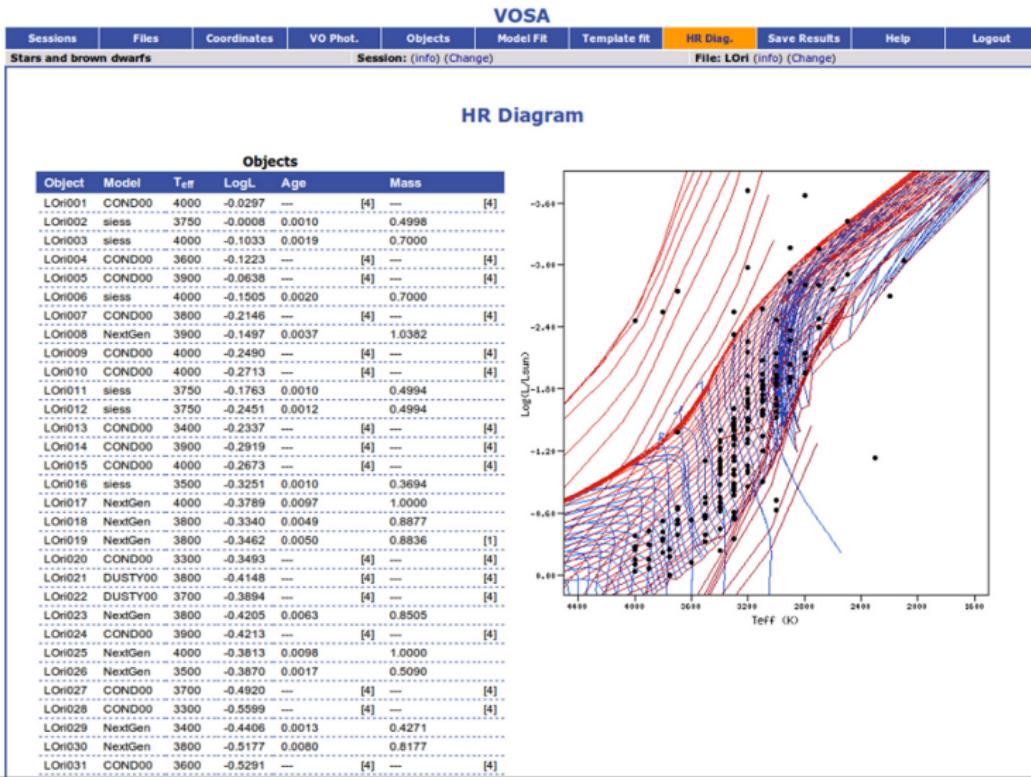

Choose the parameter ranges that you want to use for the diagram

NextGen Isochrones
Theoretical Evolutionary Tracks from Baraffe, Chabrier, Allard, Hauschildt, 1998, A&A, 337, 403 "Evolutionary models for solar metallicity low-mass stars: mass-magnitude relationships and color-magnitude diagrams" and Baraffe, Chabrier, Allard, Hauschildt, 2001, A&A, accepted "Evolutionary models for low-mass stars and brown dwarfs: uncertainties and limits at very young ages"
t: - (Min/Max value for the age of the star. Ages are given in Gyr)

NextGen Evolutionary Tracks
Theoretical Evolutionary Tracks from Baraffe, Chabrier, Allard, Hauschildt, 1998, A&A, 337, 403 "Evolutionary models for solar metallicity low-mass stars: mass-magnitude relationships and color-magnitude diagrams" and Baraffe, Chabrier, Allard, Hauschildt, 2001, A&A, accepted "Evolutionary models for low-mass stars and brown dwarfs: uncertainties and limits at very young ages"
m: - (Min/Max value for the mass of the star. Masses are given in Msun)

DUSTY99 Isochrones
Theoretical Evolutionary Tracks from Chabrier, Baraffe, Allard, Hauschildt, 2000, ApJ, 542, 464 "Evolutionary models for very-low-mass stars and brown dwarfs with dusty atmospheres" and Baraffe, Chabrier, Allard, Hauschildt, 2002, A&A, 382, 563 "Evolutionary
